ABOUT ME

I am Muhammad Rizqi Maulana, a full-stack developer based in Mataram, Indonesia, specialized in React, Next.js, and React Native. I focus on building reliable products end-to-end, from interface and API through to deployment, with particular attention to system reliability and data security. Beyond building products, I also enjoy sharing knowledge through mentoring and code review for junior developers.

CORE COMPETENCIES

- **Full-stack development** — designing and building web applications from the frontend (React/Next.js) through the backend (Node.js/NestJS) to deployment
- **API integration & data management** — connecting internal and third-party APIs, and managing data through MongoDB and Supabase
- **Security-conscious development** — designing security-first workflows, including input validation and session handling to prevent misuse
- **Mentoring & technical leadership** — guiding junior developers, conducting code reviews, and sharing software development best practices
- **Cross-team collaboration** — working with backend engineers and other teams on API integration and UI state management

PROFESSIONAL EXPERIENCE

Full-Stack Developer — Full Code Studios, London, United Kingdom (Jul 2024 – Apr 2026)

As a Full-Stack Developer at Full Code Studios, I built and shipped full-stack web applications using React/Next.js for the frontend and Node.js/NestJS for the backend, owning each feature fully from concept through development to production deployment. I integrated internal and third-party APIs to support core product functionality, and built CI/CD pipelines to automate testing and deployment, making releases faster and less prone to human error. On the frontend side, I developed responsive, accessible interfaces using React and Tailwind CSS, with consistent presentation across device sizes. One of my key outcomes at this company was ScanHadir — covered in more detail in the Featured Project section below.

Front-End Developer — Cloud Gakkai, Tangerang, Indonesia (Sep 2023 – Jan 2024)

Previously, as a Front-End Developer at Cloud Gakkai, I was responsible for building responsive, accessible interfaces using React and Tailwind CSS for client-facing products. I also applied SEO best practices on those pages to improve organic visibility and page performance, and worked with backend engineers on API integration and UI state management to keep data exchange between frontend and backend smooth and consistent.

Mentor — UnboxLabs, Tangerang, Banten, Indonesia (Sep 2023 – Mar 2024)

I also enjoy mentoring others. As a Mentor at UnboxLabs, I guided junior developers in React, JavaScript, and full-stack fundamentals, conducted regular code reviews, and shared best practices for writing clean, maintainable code. My contribution to the mentoring program was formally recognized through a Teaching Certificate and an Award of Appreciation from UnboxLabs.

FEATURED PROJECT: SCANHADIR

One of the projects that best represents my full-stack ability is ScanHadir, a digital attendance system I designed and built end-to-end at Full Code Studios. The project grew out of the need for attendance tracking that was not just digital, but verifiable and resistant to manipulation. Its key features include:

- QR-code-based check-in verification, replacing manual logging and closing common loopholes like buddy-punching
- Real-time attendance tracking with GPS-based location verification, ensuring every check-in is accurate, timestamped, and tamper-resistant
- An admin dashboard for live monitoring and reporting, giving instant visibility into attendance across users and locations
- A security-first workflow spanning QR validation to session handling, specifically designed to prevent spoofing and protect data integrity

Built with: React/Next.js • Node.js/NestJS • MongoDB/Supabase • TypeScript

TECHNICAL SKILLS

Frontend & Mobile

React, Next.js, React Native, TypeScript, JavaScript, Tailwind CSS

Building responsive, accessible, and performant web and mobile interfaces.

Backend & Data

Node.js, NestJS, MongoDB, Supabase, API Integration

Developing backend logic, managing data, and integrating internal and third-party services.

Tools & Practices

Git, CI/CD, SEO

Supporting team collaboration, release automation, and product visibility optimization.

EDUCATION & CERTIFICATIONS

B.Eng. Software Engineering

Bumigora University

Currently in progress (not yet graduated)

Teaching Certificate — Mentorship

18–21 Feb 2024

Award of Appreciation — Mentorship

18–21 Feb 2024

Awarded by UnboxLabs for contributions to mentoring junior developers and sharing software development best practices.
